Public Offer

for access to the automated image processing service in Telegram

Edition dated 26 September 2026. Version: 2026-09-26.3.

Individual Entrepreneur Puzikov Vasily Nikolaevich (Пузиков Василий Николаевич), whose details are set out in Section 12 (the **Provider**), offers an individual who has legal capacity and is at least 18 years old (the **User**) to enter into an agreement on the terms of this offer. The terms of a particular feature, including the number of undresses it uses, are shown in the selected bot before a request is submitted.

1. Meaning of key terms

1.1. **Service** means the software system that receives an image and a selected style or text request, processes them automatically, and sends the result to the private chat with the selected Telegram bot.

1.2. **Selected bot** means the bot through which the User submitted a request or arranged a top-up. An integrated partner bot uses the Service infrastructure; information about the particular bot is displayed in its interface.

1.3. **Undress** is the internal name of a unit of access to the Service. One undress is used for one completed generation with delivery of the Result to the User. The accounting treatment of this unit and its distinction from the payment currency are explained in Section 4.

1.4. **Result** means an image created or modified automatically at the User's request. The Result is synthetic and does not, by itself, establish that the depicted events, appearance, or actions occurred in reality.

2. Subject matter and conclusion of the agreement

2.1. The Provider gives the User access to the Service and arranges automated processing of a submitted image within the available balance of undresses. A request is made through the interface of the selected bot.

2.2. Acceptance occurs when the User separately presses the button for accepting the offer in the selected bot after being given access to this edition, its date, and the personal data processing policy. If a bot does not have such a button, this edition is not yet offered for acceptance through that bot. Confirmation of age and image rights does not replace acceptance. Merely viewing the document, remaining silent, or receiving a message does not constitute acceptance.

2.3. Upon acceptance, the Provider records the User's Telegram ID, the identifier of the selected bot, the date and time, the version of the accepted edition, and the fact that the button was pressed. The agreement is concluded at the time of that acceptance.

2.4. The User may stop using the Service. Withdrawal from the agreement and refund of any payment made are carried out without prejudice to the User's rights under consumer protection law.

3. Age, image rights, and prohibited requests

3.1. The Service is intended only for persons aged 18 or over. The User must not submit images of persons under 18 or of persons whose age gives rise to reasonable doubt, and must not create sexualized depictions of characters who are depicted as, or appear to be, minors.

3.2. Before submitting **each** image, the User must ensure that they are entitled to use it for the selected processing. If it depicts another person, the User must first obtain that person's genuine and verifiable consent to the upload, transmission for processing, and the particular intended type of alteration, including an explicit or sexualized Result where that mode is selected. Further public publication of the image or Result may require a separate legal basis. At the Provider's reasonable request, the User must confirm the existence of the necessary rights and consents without disclosing excessive information.

3.3. The following are prohibited: creating or distributing realistic intimate or other sexualized images of a person without that person's consent; material involving sexual violence or coercion; processing images of minors; infringing privacy, copyright, or other third-party rights; impersonating another person; circumventing technical restrictions; and other acts prohibited by applicable law.

3.4. The User is responsible for the legality of the material they provide and their subsequent use of the Result. The Provider may reject a request or restrict access where there are reasonable indications of a breach of this Section or of the law. This does not relieve the Provider of its own statutory duties and liability. Where there is doubt, the Provider may ask for further confirmation of rights and consent or decline to process the request.

3.5. When distributing the Result, the User must not mislead others into believing that the synthetic image accurately portrays the depicted person's real actions or appearance.

4. Unit of access, price, and payments

Undress - the unit of access to the Service

4.1. **One undress corresponds to one completed generation of a Result and its delivery to the User through the selected bot.** An undress is used solely to account for access to the processing of requests. It is not money, electronic money, a digital currency, or a payment currency, and it cannot be exchanged for money. This does not restrict the User's right to a refund of payment where provided by law.

4.2. Undresses are recorded in a single balance for the User's Telegram account across all bots operating on the Service infrastructure, including first-party and integrated partner bots. Crediting, reserving, debiting, or returning an undress through any such bot changes the shared balance, which is displayed in the selected bot. Photos, messages, and menu state are maintained separately in each bot and are not automatically transferred when the User moves to another bot.

4.3. When a request enters the queue, one undress is removed from the available balance and recorded as reserved. After successful generation and delivery of the Result through the selected bot, its use is confirmed. If processing does not take place or delivery of the

Result fails, the undress is returned to the available balance. Resetting or replacing the current photo does not cancel a request that has already entered the queue.

4.4. Credits, reservations, uses, and returns of undresses are recorded in the Service's internal accounts. If the User disputes an operation, they may contact the Provider using the details in Section 12, stating their Telegram ID, the selected bot, and the approximate time of the operation.

Package price and payment currency

4.5. Before confirming a paid order, the User is shown the package contents, the number of undresses, the full amount payable and payment currency, and the applicable payment terms. The purchase requires the User's separate confirmation in the relevant interface. If paid top-ups are unavailable in the selected bot, an order cannot be placed through that bot.

4.6. If a package price is calculated using another currency or internal indicators, the final amount payable by the User is the full amount in the payment currency shown before the order is confirmed. An undress has no fixed exchange rate against the payment currency. If the final price changes before the order is placed, the User is shown the new amount for separate confirmation. Payment documents are issued in accordance with the law and the applicable rules of the payment service.

Refund of payment

4.7. Paid undresses are credited to the shared balance after successful payment has been confirmed. When a payment is refunded, the available balance is reduced by the number of units in the refunded package, up to the amount remaining. Any shortfall is recorded as an accounting debt in undresses and is cleared before units from subsequent paid top-ups become available. That record is not a separate monetary debt owed by the User and does not restrict the User's statutory rights.

4.8. The User may withdraw from a paid service in the cases and manner provided by law. In determining the refund amount, the actual performance of the order is taken into account, together with, where the law permits, the Provider's proven expenses directly related to performing that particular order. The terms concerning undresses do not deprive the User of statutory remedies for defects, delay, or failure to provide the service.

4.9. The Provider may change the terms of **future** packages and features by displaying the new terms in the interface before an order is placed. The terms of an order already placed are not changed retroactively except where expressly permitted by law.

5. Processing requests and quality of service

5.1. The User sends a photo to the private chat with the selected bot, selects a category and style, or enters a permitted text request. If an undress is available and the applicable restrictions are met, the Service places the request in a queue and confirms its acceptance. The Result is sent as a separate message to the same chat.

5.2. Processing time depends on the queue, the operation of Telegram, the communications network, and engaged technology providers. If a request cannot be completed, the

undress-return rule in Clause 4.3 applies. The Service reports an error where technically possible.

5.3. Automated processing may produce an inaccurate or unexpected result, or one resembling other material. The Provider does not promise a particular artistic outcome unless it is expressly stated for the relevant feature. This does not exclude the User's rights in the event of an objectively defective service or a failure to provide it.

5.4. To help investigate an error, the User may provide their Telegram ID, the selected bot, and the date and approximate time of the request. The original image should not be sent again to support unless support separately requests it and there is a lawful basis.

6. Rights in materials and the Result

6.1. Rights in original images and the rights of persons depicted in them remain with the respective rights holders. Sending an image does not transfer the exclusive right in it to the Provider.

6.2. The User permits the Provider and persons engaged to provide the service to process the image and request technically to the extent necessary to receive them, create and deliver the Result, operate the Service, and handle enquiries. The conditions under which third parties access the material, the purposes of processing, and retention periods must be disclosed in the personal data processing policy. Publishing material in advertising or public sources requires a separate legal basis and the necessary consents.

6.3. Whether exclusive rights in the Result arise, and to whom they belong, is determined under applicable law. The Provider does not guarantee that the Result is unique, that the User obtains an exclusive right in it, or that it bears no similarity to other material.

6.4. The User is responsible for checking whether public posting and commercial use of the Result are lawful, including with regard to a person's image rights, personal data, trademarks, and third-party copyright.

7. Personal data and messages

7.1. To operate the Service, the following may be processed: Telegram ID, profile information, balance and transaction history, original images and their file identifiers, requests, processing parameters and results, and technical information about the performance of requests. The purposes, recipients, retention arrangements, and procedure for personal data enquiries are described in the personal data processing policy.

7.2. Messages are transmitted through Telegram. Images and requests are sent to an engaged technology provider for processing. Information about recipients and any cross-border transfers is provided in the policy. Acceptance of the offer does not replace separate consent to data processing where such consent is required by law.

7.3. Resetting the current photo removes its association with the current Service session. It does not cancel a request already placed in the queue and, by itself, does not delete messages from a Telegram chat or data previously transmitted to other participants in the processing. The procedure for deletion and retention limits is described in the personal data processing policy.

7.4. The Service may send messages through the selected bot about accepted requests, results, balance operations, and the operation of the Service. Advertising messages must not be sent until a separate mechanism for the addressee's prior consent and for opting out of further messages has been introduced. The bot currently has no such mechanisms. Acceptance of this offer does not constitute consent to advertising.

7.5. Personal data enquiries should be sent to the email address in Section 12. The User should provide enough information to identify the enquiry without unnecessarily disclosing images or other data.

8. Integrated bots and partner features

8.1. A Telegram bot owner may connect their bot to the Service infrastructure in the manner provided by the interface. Use of an integrated bot does not change the party providing the service to the end User unless the interface and separate terms expressly state otherwise.

8.2. The terms of promotion, markup, calculation, and payment of partner or referral remuneration are set out in separate partner-program terms. Statistics in a bot do not, by themselves, mean that a right to payment has arisen.

9. Access restrictions and liability

9.1. The Provider may temporarily restrict access in the event of a breach of Section 3, a threat to the security of the Service, or misuse of its features. If the User disputes a restriction, they may contact the Provider using the details in Section 12. Rights in respect of paid services that have not been provided are preserved to the extent required by law.

9.2. The parties are liable under applicable law. The unavailability of Telegram, a communications network, or a technology provider is assessed in light of the causes and circumstances of the particular case; merely referring to those services does not release the Provider from liability. An undress is returned after an unsuccessful generation in accordance with Clause 4.3.

9.3. The terms of this offer do not restrict mandatory consumer rights or require disputes to be heard in a court at the Provider's location.

10. Enquiries and disputes

10.1. Enquiries, complaints, error reports, and demands should be sent to the email address in Section 12. The User should state their Telegram ID, the selected bot, the substance of the enquiry, and a convenient means of receiving a response. The Provider considers demands within the periods prescribed by law.

10.2. A person who believes that their image has been processed or distributed without consent may use the same contact details. The Provider reviews the report, suspends further processing of the disputed material that is within its control where necessary, and takes measures within its control and as required by law.

10.3. The parties may resolve a dispute through correspondence. This does not restrict the User's right to apply to a competent authority or court. The law of the Russian Federation governs the parties' relationship to the extent permitted by mandatory rules.

11. Term and new editions

11.1. This edition is effective from its publication on docs.nudress.me until withdrawn or replaced. The Provider keeps records of the editions that were available to Users.

11.2. A new edition applies to new requests after the User has been given an opportunity to review it. If a change affects the User's rights or obligations, separate acceptance of the new edition is required before continued use. The terms of an order already placed remain in force unless the law permits otherwise.

11.3. The current edition, its effective date, information about the Provider, and contact details for enquiries must be accessible from the bot.

12. Provider details

Individual Entrepreneur Puzikov Vasily Nikolaevich (Пузиков Василий Николаевич)

- Taxpayer Identification Number (INN): **081408354915**
